DISCLAIMER

Disruptions to health systems can impede provision of and access to essential health services. Communities' vulnerability to increased morbidity and mortality substantially increases when a lack of reliable information prevents sound decision-making, especially in rapidly changing environments that require continued assessment. The Health Resources and Services Availability Monitoring System (HeRAMS) aims to provide decision-makers and health stakeholders at large with vital and up-to-date information on the availability of essential health resources and services, help them identify gaps and determine priorities for intervention.

HeRAMS draws on the wealth of experience and knowledge gathered by the World Health Organization (WHO) and health sector actors, including nongovernmental organizations, donors, academic institutions and other technical bodies. It builds on a collaborative approach involving health service providers at large and integrating what is methodologically sound and feasible in highly constrained, low-resourced and rapidly changing environments such as humanitarian emergencies. Rapidly deployable and scalable to support emergency response and fragile states, HeRAMS can also be expanded to - or directly implemented as - an essential component of routine health information systems. Its modularity and scalability make it an essential component of emergency preparedness and response, health systems strengthening, universal health coverage and the humanitarian development nexus.

The introduction of HeRAMS in Tigray, Ethiopia has allowed for the assessment of 853 health service delivery units (HSDUs) out of the targeted 860 HSDU across accessible areas. Data presented in this report were collected between May 7th and June 20th, 2023. It is important to note that the deployment of HeRAMS is ongoing, including data verification and validation. Hence, this analysis is not final and was produced solely for the purpose of informing operations.

This is the first report of the **HeRAMS Tigray Baseline Report 2023** series, focusing on the operational status of HSDUs, level and type of support provided by partners, and availability of basic amenities. For more in-depth information on availability of essential health services and main barriers impeding service delivery, specialized reports are available on essential clinical and trauma care services¹, child health and nutrition services², communicable disease services³, sexual and reproductive health services⁴, and non-communicable disease and mental health services⁵.

Caution must be taken when interpreting the results presented in this report. Differences between information products published by WHO, national public health authorities, and other sources using different inclusion criteria and different data cut-off times are to be expected. While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change.

For additional information, please see <https://www.who.int/initiatives/herams> or contact herams@who.int

INTERPRETATION GUIDE

Indicator status

Arc charts provide an overview of the overall status of an indicator (i.e. functionality, availability, sufficiency, etc.), hereafter referred to as “availability”. The total number of HSDUs included in the analysis of an indicator is shown inside the arc chart. It is important to note that the total number of HSDUs included in the analysis of an indicator can vary due to the exclusion of non-operational HSDUs from subsequent analyses (see page 4 for details).

Column charts provide a breakdown of the indicator availability by zone or by zone and HSDU type. By default, these charts exclude HSDUs where an indicator is not applicable or not relevant. The total number of HSDUs included in each column is indicated below the respective zone or HSDU type name.

Each **donut chart** represents a type of HSDU. The percentage of HSDUs where the indicator was available or partially available is displayed inside the donut. Additionally, the cumulative number of HSDUs of that type is shown at the bottom of the chart, below the HSDU type name. In cases where the indicator was not available in any HSDU of that type, the number inside the chart will indicate the percentage of HSDUs for which the indicator was partially or not available.

Maps display availability of an indicator at the woreda level. Each circle corresponds to the cumulative number of HSDUs in a woreda and may be divided into multiple smaller circles with the color representing the proportion of HSDUs of a specific availability status. To highlight areas not reporting, respectively the impact of non-operational HSDUs, maps depict all HSDUs targeted with HerAMS.

Map label:

Zone name
X / X%

By default, map labels display the total number of HSDUs where the indicator could be assessed and is applicable as well as the percentage of these HSDUs where the indicator is at least partially available. For ease of readability, labels were removed for woredas where the indicator was not applicable in any or at least partially available in all HSDUs. Any deviation from this is clearly indicated in the map legend.

Barriers

To gain a more comprehensive understanding of the challenges faced by HSDUs, whenever an indicator was not or only partially available, main barriers impeding availability were recorded. Similarly, questions on building and equipment conditions, functionality and accessibility gather information on the underlying causes for non or partially operating HSDUs.

Each **donut chart** indicates the percentage of HSDUs having reported a specific barrier. The total number of HSDUs reporting at least one barrier is shown below the chart header.

Bar charts further break down barriers by zone with each bar representing a specific barrier. Similar to the donut chart, the percentage of each bar represents the number of HSDUs that have reported a particular barrier. Additionally, the number of HSDUs reporting at least one barrier is displayed below the name of each zone.

Important: The denominator for barrier charts excludes HSDUs where the indicator is fully available. It should further be noted that HSDUs can report up to three barriers for each indicator. Thus, the sum of all barriers may exceed 100%.

Basic amenity types

For some basic amenities additional information on main sources or types of amenities available were collected. The analysis of basic amenities follows the same logic as barriers (see above). Types of amenities were only evaluated if the amenity was at least partially available and focal point were allowed to report up to three main sources or types.

OVERVIEW OF HSDUs EVALUATED

Data collection summary

860 HSDUs targeted

1 Closed
5 Planned
1 Not reporting

853 HSDUs assessed

Building condition

28 Fully damaged
736 Partially damaged
76 Not relevant

Equipment condition

232 Fully damaged
612 Partially damaged

Functionality

68 Non-Functioning
757 Partially Functioning

Accessibility

3 Not accessible
732 Partially accessible

HSDUs reported as at least partially operational⁶
(853 HSDUs assessed)

Reporting frequency and operational status by zone

Zone	Specialized hospital			Referral hospital			General hospital			Primary hospital			Health center			Health post			TOTAL		
	O	N/O	N/R	O	N/O	N/R	O	N/O	N/R	O	N/O	N/R	O	N/O	N/R	O	N/O	N/R	O	N/O	N/R

SOUTH EASTERN	-	-	-	-	-	-	-	-	-	-	-	-	25	-	-	80	3	4	108	3	4
SOUTHERN	-	-	-	-	-	-	1	1	-	-	-	-	18	1	-	54	5	-	75	7	-
TOTAL	1	-	-	1	-	-	11	1	-	1	-	1	182	8	0	540	89	7	754	99	7

O = Partially operational - N/O = Not operational - N/R = Not reporting, closed and planned HSDUs

⁶HSDUs (Health Service Delivery Units) reported as destroyed, non-functioning, or inaccessible are deemed unable to provide any health services, hence categorized as non-operational. Consequently, reporting ends upon confirmation of an HSDU's non-operational status.
